

## How to setup email sending in MT4 via email relay

This other method requires you to install a mail server on your own PC and also a gmail account.

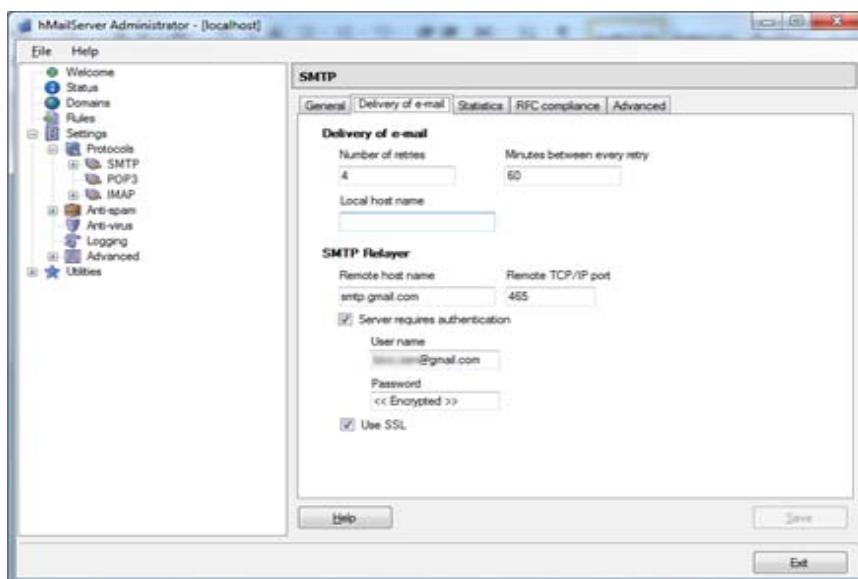

Download the latest production release of the hMailServer from the link below

<http://www.hmailserver.com/index.php?page=download>

Install it using the default settings. When prompted, set a password easy to remember, e.g. "password"

Run the hMailServer Administrator and connect using your password.

Expand Settings -> Protocols -> SMTP then click on the "Delivery of email" tab

Make sure you key in the information as follows using the screenshot as a guide.

Remote Host Name: smtp.gmail.com

Remote TCP/IP port: 465

TICK Server requires authentication

User name: your gmail account login EMAIL

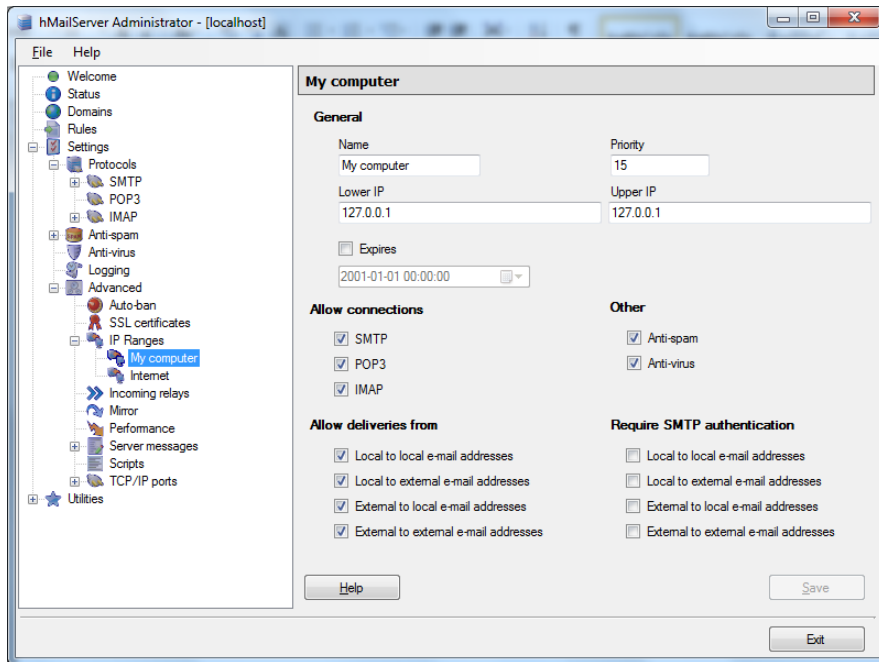

Password: your gmail account password

TICK Use SSL

Click SAVE

Then expand Settings -> Advanced -> IP Ranges -> My computer

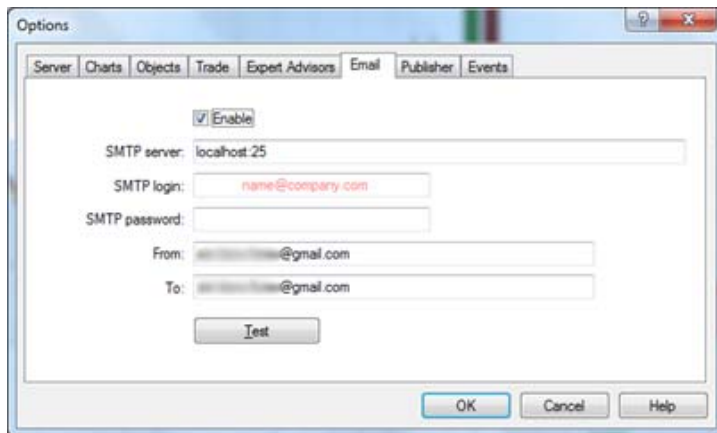

UNCHECK the bottom right option "External to external e-mail addresses"

Click SAVE

Now go to Status, Click on “Stop” then “Start” again and make sure the current status is “Running”

Now go to your MT4 Tools -> Options -> Email

Set the following

SMTP server: localhost:25

SMTP login: blank

SMTP password: blank

From: This can be anything but use your gmail account for simplicity sake

To: This is the email address that alerts will be sent to. Can set the same if you want.

Click OK then restart your MT4 platform.

You can test your setup by clicking on the "Test" button in the Email tab AFTER the restart.
